

Vending machines go contactless

Looking to equip your vending machines with contactless payment technology? Then look no further!

If you are interested in switching to contactless payment technology for your vending machines, Sokymat offers a variety of sophisticated high frequency (HF) RFID tags. They can be easily customized in terms of shape, color and material to best suit your specific needs.

Advantages of RFID technology for vending machine applications

Comfort

The customer simply presents his tag to the machine for the quick and easy purchase of a product. With a tag, there is no longer a need for coins. The customer buys more spontaneously which increases sales volume.

Cost-effectiveness

RFID allows for a great variety of applications to be integrated in a single tag. From door and network access to general cafeteria applications, all can be realized with the same tag used to operate a vending machine. RFID-enabled vending machines can easily be integrated in a company or institution with a previously installed contactless application.

Limited maintenance

With contactless technology there is none of the mechanical wear that typically occurs with magstripe or contact smart cards and contact reading units. The tag can be used as often as required with maintenance reduced to an absolute minimum.

Tailored offerings

An RFID chip can hold various levels of information, in addition to the simple registration number. Thus, a customer profile can be prepared for each user with specially personalized discounts.

Sokymat - The preferred RFID supplier for vending machine applications

The advantages of Sokymat RFID tags for vending machine applications

By turning to Sokymat for your RFID tags, **you can benefit from:**

- our **unique experience** and success in the field of high and low frequency transponders;
- **cost-effective** solutions;
- **volume production** for standard products.

Sokymat provides professional customization in terms of:

- optimized tag reading performance adapted to both your requirements and those of the environment;
- personalized tag housing (shape and material) based on your design;
- logos, laser engraving and chip programming.

Sokymat guarantees:

- **highly resistant, waterproof** (IP67, IP68) key fobs thanks to ultrasonic closing of the transponders. **The RFID key fobs will continue to work even if they accidentally end up in the washing-machine;**
- a high-quality product, ensured by specific test procedures such as a drop test, and chemical, temperature, dimensional and functional tests;
- highest quality standards as **ISO 9001:2000 certified company.**

Sokymat's transponder HF portfolio includes prelamines, ISO cards, clamshell cards, bobsleighs, ID bands, e-modules, IN tags and disc epoxy.
